

Completed Courses & Course Syllabi

Student Compilation for Admissions and Credit-Recognition Review

Student	Study Program	University	Place of Studies
Sude Nur Giritli OSZKAOR_N_EN_2022	Medicine	University of Szeged	Szeged
Document status	Purpose		
Student-created compilation, not an official transcript	Admissions review and credit-recognition evaluation		

Color-Coded Subject Sections

● Anatomy, Histology & Embryology	● Chemistry & Biochemistry	● Cell Biology & Molecular Genetics
● Physiology	● Medical Physics	● Immunology
● Surgery / Clinical Skills	● Psychology / Social Sciences	● Other Medical Subjects

Table of Contents

1. Passed Courses Summary by Subject
2. Anatomy, Histology & Embryology
3. Chemistry & Biochemistry
4. Cell Biology & Molecular Genetics
5. Physiology
6. Medical Physics
7. Immunology
8. Surgery / Clinical Skills
9. Psychology / Social Sciences
10. Other Medical Subjects

Missing weekly syllabi were added from the University of Szeged Curriculum 2025/2026 booklet. Previously completed syllabus pages were not rewritten. The curriculum booklet itself was not modified. Student grades, dates, ECTS and course codes are unchanged.

1. Passed Courses Summary by Subject

Anatomy, Histology & Embryology

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Anatomy, Histology and Embryology I.	AOK-OAK0211	2023/2024	3	Pass (2)	08. 02. 2024
Dissection Practice I.	AOK-OAK0221	2023/2024	2	Pass (2)	15. 12. 2023
Histology Practice I.	AOK-OAK0231	2023/2024	2	Satisfactory (3)	15. 12. 2023
Anatomy, Histology and Embryology II.	AOK-OAK0241	2023/2024	5	Good (4)	28. 06. 2024
Dissection Practice II.	AOK-OAK0251	2023/2024	2	Satisfactory (3)	17. 05. 2024
Histology Practice II.	AOK-OAK0261	2023/2024	2	Satisfactory (3)	17. 05. 2024

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Head, Neck and Neuroanatomy Lecture	AOK-OAK0271	2024/2025	4	Pass (2)	04. 06. 2025
Head, Neck and Neuroanatomy-Dissection Practice	AOK-OAK0281	2024/2025	2	Pass (2)	13. 12. 2024
Histology of the Nervous System and Sense Organs	AOK-OAK0291	2024/2025	2	Good (4)	10. 12. 2024

Chemistry & Biochemistry

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Medical Chemistry I.	AOK-OAK111	2023/2024	6	Good (4)	09. 01. 2024
Introduction to Medical Chemistry Lecture	AOK-OAKV141	2023/2024	2	Satisfactory (3)	19. 12. 2023
Medical Chemistry II. lecture	AOK-OAK113	2023/2024	6	Satisfactory (3)	26. 06. 2024
Chemical Misconceptions	AOK-OASZV411	2023/2024	2	Good (4)	21. 05. 2024
Biochemistry I.	AOK-OAK051	2024/2025	6	Pass (2)	04. 02. 2025
Cytomorphology and Microtechnics	AOK-OAKV211	2024/2025	2	Good (4)	16. 12. 2024
How to learn Biochemistry?	AOK-OAKV361	2024/2025	1	Pass (2)	10. 06. 2025

Cell Biology & Molecular Genetics

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Cell Biology and Molecular Genetics I	AOK-OAK151	2023/2024	4	Pass (2)	06. 02. 2024
Cell Biology and Molecular Genetics II	AOK-OAK153	2023/2024	4	Pass (2)	02. 07. 2024

Physiology

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Medical Physiology I.	AOK-OAK091	2024/2025	8	Pass (2)	28. 01. 2025
Medical Physiology II.	AOK-OAK093	2025/2026	10	Good (4)	01. 07. 2026

Medical Physics

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Medical Physics I.	AOK-OAK101	2023/2024	2	Pass (2)	21. 12. 2023
Measurements in medical physics I.	AOK-OAK103	2024/2025	1	Good (4)	06. 01. 2025
Medical Physics II. lecture	AOK-OAK104	2023/2024	3	Pass (2)	20. 06. 2024
Measurements in medical physics II.	AOK-OAK106	2023/2024	1	Satisfactory (3)	28. 05. 2024
Medical Statistics lecture	AOK-OAK107	2023/2024	1	Good (4)	21. 05. 2024
Medical Statistics practice	AOK-OAK108	2023/2024	2	Good (4)	24. 05. 2024

Immunology

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Immunology	AOK-OAK061	2024/2025	2	Excellent (5)	27. 06. 2025

Surgery / Clinical Skills

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Basic Life Support I.	AOK-OAK011	2023/2024	2	Excellent (5)	13. 12. 2023
Basic Surgical Skills lecture	AOK-OAK141	2024/2025	3	Excellent (5)	27. 05. 2025

Psychology / Social Sciences

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Introduction to Medicine lecture	AOK-OAK041	2023/2024	2	Satisfactory (3)	19. 12. 2023
Introduction to Psychology, Communication lecture	AOK-OAK131	2024/2025	1	Pass (2)	26. 05. 2025
Medical Sociology	AOK-OAK121	2024/2025	2	Excellent (5)	28. 11. 2024
Medical Anthropology Seminar	AOK-OAK081	2024/2025	1	Excellent (5)	26. 05. 2025

Other Medical Subjects

Course name	Course code	Semester/year	ECTS	Final successful grade	Date
Hungarian Language I.	AOK-OAK601	2023/2024	0	Satisfactory (3)	09. 12. 2023
Hungarian Language II.	AOK-OAK602	2023/2024	0	Excellent (5)	15. 05. 2024
Hungarian Language III.	AOK-OAK603	2024/2025	0	Good (4)	06. 12. 2024
Hungarian Language IV.	AOK-OAK604	2024/2025	0	Satisfactory (3)	06. 06. 2025
EUGLOH Open University - Science and/or Religion	XA0021-EUGLOH-OpenU_Scie_Reli	2023/2024	3	Satisfactory	05. 01. 2024
EUGLOH Open University - Making and Breaking: The kaleidoscope of taboo	XA0021-EUGLOH-OpenU_Taboo	2023/2024	3	Excellent	07. 06. 2024

2. Anatomy, Histology & Embryology

Anatomy, Histology and Embryology I.

Official course information	Details
Course name	Anatomy, Histology and Embryology I.
Course code	AOK-OAK0211
Related course codes	AOK-OAK0211 / AOK-OAK0221 / AOK-OAK0231
Semester/year	2023/2024
Semester	1st
Course type	Lecture / Practice / Practice
Category	Compulsory
Department	Anatomy
Hours/week	2/3/2
Credit	5/3/-
ECTS in passed-course record	3
Form of exam	Exam / Term Mark / Signature
Final successful grade	Pass (2)
Date	08. 02. 2024
Related passed courses	Dissection Practice I.; Histology Practice I.

Complete Detailed Syllabus

Week	Lecture topics	Practice / Dissection / Histology topics
1	Introduction to human anatomy: anatomical nomenclature, planes, directions, axes. General osteology. General syndesmology. Basic tissues, part 1: Epithelial tissues.	Dissection: General information on the classes and exams. Injury preventive rules and dissecting room regulations. Bones of the upper limb. Histology: Use of light microscope. Introduction to histological methods. Interpretation of histological preparations.
2	General myology. General angiology.	Dissection: Joints of the upper limb. Cross-sectional anatomy of upper limb. Histology: Epithelial tissues, part 1: Kidney, Jejunum, Trachea.
3	General neuroanatomy. Spinal cord segment. Formation of the plexuses from the spinal nerves. Basic tissues, part 2: Connecting and supporting tissues.	Dissection: Muscles of the upper limb. Cross-sectional anatomy of upper limb. Histology: Epithelial tissues, part 2: Oesophagus, Finger pad, Unicellular gland, Submandibular gland.
4	Nerves of the upper limb.	Dissection: Blood vessels of the upper limb. Cross-sectional anatomy of upper limb. Histology: Connective tissues: Finger pad, Tendon, Adipose tissue, frozen adipose tissue.
5	Functional anatomy of the upper limb. Basic tissues, part 3: Muscle tissues.	Dissection: Nerves of the upper limb. Cross-sectional anatomy of upper limb. Histology: Supporting tissues: Hyaline cartilage, Elastic cartilage, Fibrocartilage, Bone, Endochondral ossification.
6	Nerve tissue, part 1.	Dissection: 1st practical assessment — Anatomy of the upper limb. Histology: Muscle tissue: Smooth muscle, Skeletal muscle cross section, Skeletal muscle longitudinal section, Cardiac muscle, Cardiac muscle iron hematoxylin.

Week	Lecture topics	Practice / Dissection / Histology topics
7	Nerve tissue, part 2. Formed elements of blood. Haematopoiesis.	Dissection: Bones of the pelvis and free lower limb. Joints of the pelvis and free lower limb. Histology: Nerve tissue, part 1: Sensory ganglion, Spinal cord, Cerebral cortex, Cerebellum, Vegetative ganglion.
8	Structure of trunk: bones, joints, muscles. Layers of thoracic wall. Surface projections of thoracic organs.	Dissection: Muscles of the pelvis and free lower limb. Cross-sectional anatomy of lower limb. Histology: Nerve tissue, part 2: Peripheral nerve longitudinal and cross sections, Os-stained sections, Astrocyte.
9	Biomechanical features of trunk. Functional and sectional anatomy of thorax. Immune and lymphatic systems. Thymus: anatomy and histology.	Dissection: Blood vessels and nerves of lower limb. Cross-sectional anatomy of lower limb. Histology: 1st practical assessment — Basic tissues.
10	Mediastinum: divisions, layers, contents. Heart: chambers and valves.	Dissection: 2nd practical assessment — Anatomy of lower limb. Histology: Blood vessels: Aorta, artery, artery and vein, spermatic cord.
11	Intrinsic vessels of the heart. Impulse generating and conducting system of the heart. Innervation of heart. Anatomy of pericardium. Vegetative nervous system.	Dissection: Bones, joints of trunk. Anatomy of thoracic cage. Superficial and deep back muscles. Diaphragm. Related cross-sectional anatomy. Histology: Blood smear, haematopoiesis, red bone marrow, lymphoid organs part 1: thymus.
12	General embryology. Development of embryo: gastrulation and neurulation.	Dissection: Superior mediastinum. Surface projections of heart and thoracic organs. External features of heart. Absolute and relative cardiac dullness. Histology: Lymphoid organs part 2: Spleen, lymph node, palatine tonsil, root of tongue.
13	Development of amnion and yolk sacs. Fetal blood circulation. Radiology of limbs and chest.	Dissection: Middle mediastinum. Dissection of heart, cardiac vessels and pericardium. Interior of opened heart. Posterior mediastinum. Related cross-sectional anatomy. Histology: Embryology: Spermatic cord, placenta, chicken embryo.
14	Embryology of heart and great vessels.	Dissection: 3rd practical assessment — Anatomy of trunk, thorax, mediastinum and heart. Histology: 1st practical assessment — Histology of circulation, blood smear, haematopoiesis, lymphoid organs and embryology.

Dissection Practice I.

Official course information		Details
Course name	Dissection Practice I.	
Course code	AOK-OAK0221	
Semester/year	2023/2024	
ECTS	2	
Final successful grade	Pass (2)	
Date	15. 12. 2023	
Corresponding syllabus	Anatomy, Histology and Embryology I. — Dissection topics	

Complete Detailed Syllabus

Week	Dissection topics
1	General information on the classes and exams. Injury preventive rules and dissecting room regulations. Bones of the upper limb.
2	Joints of the upper limb. Cross-sectional anatomy of upper limb.
3	Muscles of the upper limb. Cross-sectional anatomy of upper limb.
4	Blood vessels of the upper limb. Cross-sectional anatomy of upper limb.
5	Nerves of the upper limb. Cross-sectional anatomy of upper limb.
6	1st practical assessment — Anatomy of the upper limb.
7	Bones of the pelvis and free lower limb. Joints of the pelvis and free lower limb.
8	Muscles of the pelvis and free lower limb. Cross-sectional anatomy of lower limb.
9	Blood vessels and nerves of lower limb. Cross-sectional anatomy of lower limb.
10	2nd practical assessment — Anatomy of lower limb.
11	Bones, joints of trunk. Anatomy of thoracic cage. Superficial and deep back muscles. Diaphragm. Related cross-sectional anatomy.
12	Superior mediastinum. Surface projections of heart and thoracic organs. External features of heart. Absolute and relative cardiac dullness.
13	Middle mediastinum. Dissection of heart, cardiac vessels and pericardium. Interior of opened heart. Posterior mediastinum. Related cross-sectional anatomy.
14	3rd practical assessment — Anatomy of trunk, thorax, mediastinum and heart.

Histology Practice I.

Official course information		Details
Course name		Histology Practice I.
Course code		AOK-OAK0231
Semester/year		2023/2024
ECTS		2
Final successful grade		Satisfactory (3)
Date		15. 12. 2023
Corresponding syllabus		Anatomy, Histology and Embryology I. — Histology topics

Complete Detailed Syllabus

Week	Histology topics
1	Use of light microscope. Introduction to histological methods. Interpretation of histological preparations.
2	Epithelial tissues, part 1: Kidney, Jejunum, Trachea.
3	Epithelial tissues, part 2: Oesophagus, Finger pad, Unicellular gland, Submandibular gland.
4	Connective tissues: Finger pad, Tendon, Adipose tissue, frozen adipose tissue.
5	Supporting tissues: Hyaline cartilage, Elastic cartilage, Fibrocartilage, Bone, Endochondral ossification.
6	Muscle tissue: Smooth muscle, Skeletal muscle cross section, Skeletal muscle longitudinal section, Cardiac muscle, Cardiac muscle iron hematoxylin.
7	Nerve tissue, part 1: Sensory ganglion, Spinal cord, Cerebral cortex, Cerebellum, Vegetative ganglion.
8	Nerve tissue, part 2: Peripheral nerve longitudinal and cross sections, Os-stained sections, Astrocyte.
9	1st practical assessment — Basic tissues.
10	Blood vessels: Aorta, artery, artery and vein, spermatic cord.
11	Blood smear, haematopoiesis, red bone marrow, lymphoid organs part 1: thymus.
12	Lymphoid organs part 2: Spleen, lymph node, palatine tonsil, root of tongue.
13	Embryology: Spermatic cord, placenta, chicken embryo.
14	1st practical assessment — Histology of circulation, blood smear, haematopoiesis, lymphoid organs and embryology.

Anatomy, Histology and Embryology II.

Official course information		Details
Course name		Anatomy, Histology and Embryology II.
Course code		AOK-OAK0241
Related course codes		AOK-OAK0241 / AOK-OAK0251 / AOK-OAK0261
Semester/year		2023/2024
Semester		2nd
Course type		Lecture / Practice / Practice
Category		Compulsory
Department		Anatomy
Hours/week		2/3/2
Credit		3/3/2
ECTS in passed-course record		5
Form of exam		Exam / Term Mark / Term Mark
Final successful grade		Good (4)
Date		28. 06. 2024
Related passed courses		Dissection Practice II.; Histology Practice II.

Complete Detailed Syllabus

Week	Lecture topics	Practice / Dissection / Histology topics
1	Anatomy of the upper airways. Anatomy of lower airways. Development of respiratory system.	Dissection: Summary of mediastinum: divisions and contents. Related cross-sectional anatomy. Histology: Recapitulation.
2	Anatomy, histology and development of oral cavity, teeth and tongue.	Dissection: Nasal cavity, paranasal sinuses, larynx, trachea, lungs and pleura. Histology: Respiration: Trachea, Lung, Lung orcein+H.
3	Anatomy, histology and development of oropharyngeal isthmus, pharynx and esophagus. Anatomy, histology and development of large salivary glands.	Dissection: Cross-sectional anatomy of nasal cavity, paranasal sinuses, larynx, trachea, lungs. Histology: Digestive system: Lip, dorsum of tongue, circumvallate papilla, parotid gland, submandibular gland, sublingual gland.
4	Blood supply, lymphatic drainage, innervation and topographical relationships of abdominal organs.	Dissection: Muscles of abdominal wall, rectus sheath. Surface projections of abdominal organs. Topographic division of abdominal cavity. Peritoneum, omental bursa. Histology: General structure of alimentary tract. Esophagus.
5	Anatomy of stomach, small and large intestines. Histology and embryology of stomach, small and large intestines.	Dissection: Midsagittal plane section of head: oral cavity, pharynx, esophagus. Histology: Cardia, fundus/corpus, pylorus, duodenum, jejunum, ileum.
6	Anatomy, histology and development of liver, extrahepatic duct system, gall bladder and pancreas.	Dissection: Stomach. Blood supply to abdominal organs. Branches of abdominal aorta. Related cross-sectional anatomy. Histology: Large intestine, vermiform appendix, anal canal.
7	Anatomy of retro-peritoneum. Anatomy and histology of urinary system. Investigation of alimentary system by imaging techniques.	Dissection: Topography and anatomy of small and large intestines. Related cross-sectional anatomy. Histology: Liver, liver Ag, liver Kupffer cells, gallbladder, pancreas.

Week	Lecture topics	Practice / Dissection / Histology topics
8	Anatomy of female genital organs.	Dissection: Anatomy of liver, extrahepatic ducts, pancreas and spleen. Anatomy of hepatic portal vein and inferior vena cava. Related cross-sectional anatomy. Histology: 1st practical assessment — Respiratory and digestive systems.
9	Anatomy of male genital organs. Sacral parasympathetic system. Anatomy of female and male genitalia.	Dissection: 1st practical assessment — Respiratory and digestive systems, spleen and abdominal wall. Histology: Urogenital systems: Kidney, ureter, urinary bladder, penile urethra.
10	Development of urogenital system.	Dissection: Posterior abdominal wall. Retroperitoneal organs and surface projections. Anatomy and topography of kidneys and ureters. Histology: Ovary, uterine tube, uterus, cervix of uterus.
11	Pelvic connective tissue structures. The perineum. Endocrine organs, part 1.	Dissection: Female genital organs. Study of mid-sagittal plane-cut preparations of female pelvis and perineum. Related cross-sectional anatomy. Histology: Testis-epididymis, spermatic cord, seminal vesicle, prostate, penis.
12	Endocrine organs, part 2.	Dissection: Male genital organs. Inguinal canal. Study of mid-sagittal plane-cut preparations of male pelvis and perineum. Related cross-sectional anatomy. Histology: Endocrine organs: Diencephalon, hypophysis, pineal gland.
13	Endocrine organs, part 2. Investigation of uropoietic system by imaging techniques.	Dissection: Female and male perineum, ischioanal fossa, pudendal canal. Related cross-sectional anatomy. Histology: Thyroid gland, parathyroid gland, suprarenal gland, pancreas, corpus luteum.
14	Investigation of female and male genitalia by imaging techniques.	Dissection: 2nd practical assessment — Urogenital organs, lesser pelvis and perineum. Histology: 2nd practical assessment — Urogenital and endocrine organs.

Dissection Practice II.

Official course information		Details
Course name	Dissection Practice II.	
Course code	AOK-OAK0251	
Semester/year	2023/2024	
ECTS	2	
Final successful grade	Satisfactory (3)	
Date	17. 05. 2024	
Corresponding syllabus	Anatomy, Histology and Embryology II. — Dissection topics	

Complete Detailed Syllabus

Week	Dissection topics
1	Summary of mediastinum: divisions and contents. Related cross-sectional anatomy.
2	Nasal cavity, paranasal sinuses, larynx, trachea, lungs and pleura.
3	Cross-sectional anatomy of nasal cavity, paranasal sinuses, larynx, trachea, lungs.
4	Muscles of abdominal wall, rectus sheath. Surface projections of abdominal organs. Topographic division of abdominal cavity. Peritoneum, omental bursa.
5	Midsagittal plane section of head: oral cavity, pharynx, esophagus.
6	Stomach. Blood supply to abdominal organs. Branches of abdominal aorta. Related cross-sectional anatomy.
7	Topography and anatomy of small and large intestines. Related cross-sectional anatomy.
8	Anatomy of liver, extrahepatic ducts, pancreas and spleen. Anatomy of hepatic portal vein and inferior vena cava. Related cross-sectional anatomy.
9	1st practical assessment — Respiratory and digestive systems, spleen and abdominal wall.
10	Posterior abdominal wall. Retroperitoneal organs and surface projections. Anatomy and topography of kidneys and ureters.
11	Female genital organs. Study of mid-sagittal plane-cut preparations of female pelvis and perineum. Related cross-sectional anatomy.
12	Male genital organs. Inguinal canal. Study of mid-sagittal plane-cut preparations of male pelvis and perineum. Related cross-sectional anatomy.
13	Female and male perineum, ischioanal fossa, pudendal canal. Related cross-sectional anatomy.
14	2nd practical assessment — Urogenital organs, lesser pelvis and perineum.

Histology Practice II.

Official course information		Details
Course name		Histology Practice II.
Course code		AOK-OAK0261
Semester/year		2023/2024
ECTS		2
Final successful grade		Satisfactory (3)
Date		17. 05. 2024
Corresponding syllabus		Anatomy, Histology and Embryology II. — Histology topics

Complete Detailed Syllabus

Week	Histology topics
1	Recapitulation.
2	Respiration: Trachea, Lung, Lung orcein+H.
3	Digestive system: Lip, dorsum of tongue, circumvallate papilla, parotid gland, submandibular gland, sublingual gland.
4	General structure of alimentary tract. Esophagus.
5	Cardia, fundus/corpus, pylorus, duodenum, jejunum, ileum.
6	Large intestine, vermiform appendix, anal canal.
7	Liver, liver Ag, liver Kupffer cells, gallbladder, pancreas.
8	1st practical assessment — Respiratory and digestive systems.
9	Urogenital systems: Kidney, ureter, urinary bladder, penile urethra.
10	Ovary, uterine tube, uterus, cervix of uterus.
11	Testis-epididymis, spermatic cord, seminal vesicle, prostate, penis.
12	Endocrine organs: Diencephalon, hypophysis, pineal gland.
13	Thyroid gland, parathyroid gland, suprarenal gland, pancreas, corpus luteum.
14	2nd practical assessment — Urogenital and endocrine organs.

Head, Neck and Neuroanatomy Lecture

Official course information		Details
Course name		Head, Neck and Neuroanatomy Lecture
Course code		AOK-OAK0271
Semester/year		2024/2025
ECTS		4
Final successful grade		Pass (2)
Date		04. 06. 2025
Corresponding syllabus		Head, Neck and Neuroanatomy

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation. Weekly lecture / dissection / histology columns taken from the combined Head, Neck and Neuroanatomy syllabus and assigned to the corresponding passed course.

Week	Lecture topics
1	Anatomy and blood supply of the spinal cord. Fine structure of the grey matter and white matter. Rexed's laminae and corresponding nuclei. Arrangement of the spinal cord tracts. Reflex arcs of the spinal cord.
2	Neuroanatomy and blood supply of the medulla oblongata, pons and mesencephalon. Cranial nerve nuclei and the reticular formation.
3	Diencephalon: organization. Thalamus and hypothalamus. Blood supply to the diencephalon.
4	Anatomy, histology and synaptology of the cerebellum. Neuroanatomy of the cerebellar movement regulation. Morphological and functional bases of the regulation of the blood circulation in the brain: the blood-brain barrier and the CSF.
5	Neuroanatomy of the cerebral cortex. The 'module concept' in the cerebral cortex architecture. The limbic system incl. the hippocampus.
6	Basal forebrain: amygdaloid complex. Basal nuclei: anatomy and their functions in the movement regulation.
7	Development of the nervous system.
8	The cranial nerves V, VII, VIII, IX, X, XI and XII: ganglia and peripheral branches.
9	Anatomy and histology of the eye. Parts, layers and blood supply of the retina. Accessory visual structures: eyelids, lacrimal apparatus and extraocular muscles.
10	Neuroanatomy of the visual pathway. Light reflex of the pupil. Accommodation reflex. Horizontal and vertical gaze control.
11	Anatomy and histology of the external and middle ears. Anatomy of the inner ear: osseous and membranous labyrinths.
12	Organ of Corti. Fine structures of the cristae and maculae. Auditory and vestibular pathways.
13	Development of the eye and ear.
14	The branchial apparatus: formation, development and derivatives of the pharyngeal arches, pouches and grooves.

Head, Neck and Neuroanatomy-Dissection Practice

Official course information		Details
Course name	Head, Neck and Neuroanatomy-Dissection Practice	
Course code	AOK-OAK0281	
Semester/year	2024/2025	
ECTS	2	
Final successful grade	Pass (2)	
Date	13. 12. 2024	
Corresponding syllabus	Head, Neck and Neuroanatomy	

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation. Weekly lecture / dissection / histology columns taken from the combined Head, Neck and Neuroanatomy syllabus and assigned to the corresponding passed course.

Week	Dissection topics
1	Injury preventive rules and dissecting room regulations. Cerebral hemispheres: gyri and sulci. Blood supply to the brain, the cerebral arterial circle.
2	Vertebral canal, meninges of the spinal cord and spinal cord preparation. Duplications of the dura mater, meningeal spaces. Cross-sectional anatomy of CNS.
3	Structure of the brainstem, the fourth ventricle, rhomboid fossa. Exits of the cranial nerves (from the brainstem and the skull). Cross-sectional anatomy of CNS.
4	Diencephalon. Lateral and third ventricles. Flechsig's cut. The extreme, external and internal capsules. Basal nuclei (ganglia). Cross-sectional anatomy of CNS.
5	Cerebellum: topography, parts and blood supply. Cerebellar nuclei. Cerebellar peduncles. Hippocampal formation. Cross-sectional anatomy of CNS.
6	1st practical assessment — Macroscopic anatomy of the CNS.
7	Skull, part 1: Temporal and sphenoid bones. Maxilla and mandible. The cranial base: external and internal surfaces. The facial (frontal) and lateral aspects of the skull.
8	Skull, part 2: Calvaria. Bony nasal and oral cavities. Infratemporal and pterygopalatine fossae. Meninges.
9	Muscles of the neck. Cervical triangles. Fascial system of the neck. Masticatory and facial muscles. Related cross-sectional anatomy.
10	Regions of the head and neck; their arterial supply, venous, lymphatic drainage and lymph nodes.
11	Topography of the orbit. Anatomy of the eye.
12	Anatomy of the middle and inner ears. Cross-sectional anatomy of the orbit and ears.
13	Cervical plexus. Cervical part of the sympathetic trunk. Organization of the peripheral parasympathetic system in the head. Pterygopalatine fossa. Thyroid gland. Cross-sectional anatomy of neck.
14	2nd practical assessment — Skull. Regions of the head and neck.

Histology of the Nervous System and Sense Organs

Official course information		Details
Course name		Histology of the Nervous System and Sense Organs
Course code		AOK-OAK0291
Semester/year		2024/2025
ECTS		2
Final successful grade		Good (4)
Date		10. 12. 2024
Corresponding syllabus		Head, Neck and Neuroanatomy

Complete Detailed Syllabus

Student grades, dates, ECTS and course codes are unchanged from the original compilation. Weekly lecture / dissection / histology columns taken from the combined Head, Neck and Neuroanatomy syllabus and assigned to the corresponding passed course.

Week	Histology topics
1	General information, rules and regulations. Peripheral nerve (longit. & cross sections, HE). Peripheral nerve (longit. & cross sections, Os).
2	Sensory nerve ending (HE). Sensory nerve ending (Ag). Motor end-plate (AChE). Sensory ganglion (HE). Vegetative ganglion (Ag).
3	Spinal cord (HE). Spinal cord (myelin staining). Medulla oblongata (Loyez).
4	Diencephalon (oxytocin IHC). Astrocytes (GFAP IHC). Microglia (CD11b IHC).
5	Cerebellum (HE). Cerebellum (Ag). Hippocampus.
6	Neocortex (HE). Neocortex (parvalbumin IHC).
7	1st practical assessment — The nervous systems.
8	Cranial nerves: ganglia and peripheral branches.
9	Finger pad (HE). Hairy skin (HE). Lacrimal gland (HE).
10	Eye (HE). Eyelid (HE).
11	Resting mammary gland (HE). Lactating mammary gland (HE).
12	Cochlea (HE). Tympanic cavity.
13	2nd practical assessment.
14	Recapitulation.

3. Chemistry & Biochemistry

Introduction to Medical Chemistry Lecture

Official course information		Details
Course name	Introduction to Medical Chemistry Lecture	
Course code	AOK-OAKV141	
Semester/year	2023/2024	
ECTS	2	
Final successful grade	Satisfactory (3)	
Date	19. 12. 2023	
Corresponding syllabus	Basics of Medical Chemistry	

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation. Current curriculum title: Basics of Medical Chemistry (AOK-OAKV143/AOK-OAKV144).

Week	Lecture topics	Practice / Seminar topics
1	Basic terms. Structure of atoms. The periodic table and periodic properties.	Important terms: atomic mass, molar mass, moles, chemical formulas, chemical reactions, stoichiometry.
2	Strong chemical bonds: covalent and ionic bonds.	Atomic models, electronic configuration of atoms. The periodic table.
3	Intermolecular forces: hydrogen bonding and van der Waals forces (dipole-dipole and London forces).	Strong chemical bonds. Lewis structures.
4	Bioinorganic chemistry.	Intermolecular forces.
5	States of matter. Homogenous and heterogeneous systems. Colloids.	The most important elements and compounds. Nomenclature of inorganic compounds.
6	Solutions. Metathesis reactions.	Colloids.
7	Chemical equilibrium. Electrolytes. Acid-base concepts.	Calculations involving the composition of solutions.
8	Equilibrium in electrolytes, pH, and pOH. Acid-base ionization equilibrium.	Chemical equilibrium. Acid-base concepts.
9	Acid-base titration. Buffers.	The pH concept, pH calculations.
10	Electrochemistry. Oxidation-reduction reactions. Voltaic cells.	Acid-base titration problems. Buffers. Calculations involving buffers.
11	Reaction kinetics.	Redox reactions and voltaic cells.
12	Thermodynamics.	Basic terms of thermodynamics and reaction kinetics.
13	General principles of organic chemistry: basic terms, classification, and functional groups.	Organic compounds: formulas, functional groups.
14	General principles of organic chemistry: nomenclature, types, and mechanism of reactions.	Naming and reactions of organic compounds.

Medical Chemistry I.

Official course information		Details
Course name		Medical Chemistry I.
Course code		AOK-OAK111
Semester/year		2023/2024
ECTS		6
Final successful grade		Good (4)
Date		09. 01. 2024
Corresponding syllabus		Medical Chemistry / Basics of Medical Chemistry

Medical Chemistry II. lecture

Official course information		Details
Course name	Medical Chemistry II. lecture	
Course code	AOK-OAK113	
Semester/year	2023/2024	
ECTS	6	
Final successful grade	Satisfactory (3)	
Date	26. 06. 2024	
Corresponding syllabus	Medical Chemistry	

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation. Current curriculum title: Medical Chemistry (AOK-OAK1131/AOK-OAK1141).

Week	Lecture topics	Practice / Seminar topics
1	Hydrocarbons: alkanes, alkenes, alkynes, and aromatic hydrocarbons. Alkyl halides.	Seminar: Formula drawing and nomenclature of hydrocarbons and alkyl halides. Practice: Review of requirements. Fire and safety precautions. The principle of photometry.
2	Hydroxyl group-containing organic compounds. Thiols and thioethers.	Seminar: Isomerism and chemical reactions of hydrocarbons and alkyl halides. Practice: Volumetric analysis. Using a pipette and a burette and pH measurement. Acid-base titration.
3	Amines.	Seminar: Hydroxyl group-containing organic compounds, thiols, and thioethers. Practice: Graded practice.
4	Oxo compounds.	Seminar: Amines. Practice: Graded practice.
5	Chirality, optical isomerism.	Seminar: Oxo compounds. Practice: Graded practice.
6	Carboxylic acids and substituted carboxylic acids.	Seminar: Chirality, optical isomerism. Practice: Modeling of chirality.
7	Carboxylic acid derivatives.	Seminar: Carboxylic acids and substituted carboxylic acid. Practice: Graded practice.
8	Heterocyclic compounds.	Seminar: Carboxylic acid derivatives. Lipids. Practice: Graded practice.
9	Amino acids.	Seminar: Heterocyclic compounds. Practice: Graded practice.
10	Peptides and proteins.	Seminar: Amino acids. Practice: Graded practice.
11	Monosaccharides.	Seminar: Peptides and proteins. Practice: Graded practice.
12	Di-, oligo-, and polysaccharides.	Seminar: Monosaccharides. Practice: Examination of some important functional groups.
13	Steroids. Nucleic acids.	Seminar: Di-, oligo-, and polysaccharides. Practice: Make-up laboratory practice.

Chemical Misconceptions

Official course information		Details
Course name		Chemical Misconceptions
Course code		AOK-OASZV411
Semester/year		2023/2024
ECTS		2
Final successful grade		Good (4)
Date		21. 05. 2024
Corresponding syllabus		Chemical Misconceptions

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Week	Topics
1	Fear of the Unknown: Chemicals. Life as a Risky Business. Natural Products: a Delusion of Safety.
2	Man-Made Commodities and Safety Issues. The Cholera Pandemonium: the Blind Leading the Blind. Regulating Chemicals: Maybe or Maybe Not.
3	Biowaste: Biotechnology in Perspective. Vedic Wisdom: Lead and Ayurveda. Manipulating Weather: Ocean Fertilization.
4	Test Your Cranberry Pie: Vitamin C and Benzoates. Food Dyes: the Good, the Bad, and the Ugly. To Add or Not to Add? Food Additives.
5	The Organic Vegetable Hype. Fat Matters: Margarine vs. Butter. Fake Food and Kidney Stones.
6	The Coming Shortage: Vanilla and Menthol. Red Alert: Meat Colors. Moldy Business: Whole-Grain Cereals.
7	Sweet Dreams without Sugar: Artificial Sweeteners. Sweet as Birch: Xylitol. The Thickening Stuff: Guar Gum Gumbo.
8	Is Caffeine Free of Risk? Perfect Timing: Egg Cooking. The Biofuel Dilemma.
9	Food Fraud: Then and Now. The Vitamin that Never was: B17. Joint Efforts: Glucosamine and Chondroitin.
10	Is the Use of Cyanogen Bromide Forbidden in Hospitals? Poison in Groundwater: Arsenic. Was Napoleon Murdered with Arsenic?
11	Don't Touch the Spilled Mercury! Was DDT of More Harm Than Use? Could Dioxin be the Most Toxic Substance?
12	The Great Hungarian Red Mud Deluge. The Erin Brockovich Mystery: Chromium Salts. The Fluoride War. Nonsense du jour: Food Babe.
13	What Was the Gulf War Syndrome? The Strange Case of Bisphenol A. Is grapefruit a medicinal plant?

Biochemistry I.

Official course information		Details
Course name		Biochemistry I.
Course code		AOK-OAK051
Related course codes		AOK-OAK051 / AOK-OAK052
Semester/year		2024/2025
Semester		3rd
Course type		Lecture / Practice
Category		Compulsory
Department		Biochemistry
Hours/week		4/2
Credit		6/-
ECTS in passed-course record		6
Form of exam		Exam / Signature
Final successful grade		Pass (2)
Date		04. 02. 2025

Complete Detailed Syllabus

Week	Lecture topics	Practice / Seminar topics
1	Biochemistry of the blood. RBC. Biochemistry of the blood. White blood cells.	General information, refreshment.
2	Biochemistry of the blood. Blood plasma.	Determination of bilirubin.
3	Biomembranes.	Seminar: Blood, membranes.
4	Biochemistry of the muscle.	Electrophoresis of serum proteins.
5	Biochemistry of the connective tissue. Adhesive glycoproteins.	Ion determination by colorimetry, blood gas analysis.
6	Biochemistry of cell adhesion, cytoskeleton. Biochemistry of liver. First pass metabolism, LFT.	Diagnosis of heart attack and determination of cardiovascular risk factors: cholesterol, triglycerides, lipoproteins.
7	Biochemistry of liver. Biotransformation. Biochemistry of the nervous tissue. Neurotransmitters.	Seminar: Connective tissue, cell adhesion and cytoskeleton, nutrition.
8	Biochemistry of the nervous tissue. Neurotransmitters.	Biochemistry of liver. Determination of ALAT and ASAT.
9	Biochemistry of the endocrine system.	Seminar: Liver, muscle, nervous tissue.
10	Holiday.	Cholinergic neurotransmission. Determination of cholinesterase enzyme activity.
11	Biochemistry of the endocrine system. Regulation of gene expression.	Cholinergic neurotransmission. Determination of cholinesterase enzyme activity.
12	Regulation of gene expression.	Determination of blood glucose and HbA1c.
13	Biological signalization, second messenger systems.	Determination of mRNA isoform levels by RT-PCR.

Week	Lecture topics	Practice / Seminar topics
14	Biological signalization, second messenger systems. General principles of biochemical adaptation, limits of adaptation.	Seminar: Endocrine system, cell signalling.

Biochemistry II.

Official course information		Details
Course name		Biochemistry II.
Course code		AOK-OAK053
Related course codes		AOK-OAK053 / AOK-OAK054
Semester		4th
Course type		Lecture / Practice
Category		Compulsory
Department		Biochemistry
Hours/week		4/2
Credit		6/-
Form of exam		Comprehensive Exam / Signature
Final successful grade		Not provided in the supplied materials.

Complete Detailed Syllabus

Week	Lecture topics	Practice / Seminar topics
1	Proteins and bioenergetics: structure and function of proteins, thermodynamics of living systems.	General information, work safety, principles of lab work.
2	Enzymology: enzyme classes, coenzymes, characterisation of enzymes, isoenzymes, multienzyme systems.	Determination of protein concentration.
3	Enzymology: molecular mechanism of catalysis, enzyme kinetics, modulation and regulation of enzyme activity.	Substrate specificity and temperature optimum of amylase enzyme activity.
4	Carbohydrate metabolism: digestion and absorption of carbohydrates, glycolysis, pyruvate dehydrogenase enzyme complex, gluconeogenesis.	Seminar: proteins, enzymes.
5	Carbohydrate metabolism: fructose and galactose metabolism, glycogen metabolism, pentose phosphate cycle and glucuronide shunt.	Assay of activity of alkaline phosphatase.
6	Carbohydrate metabolism: regulation of blood glucose level, glycoproteins. Lipid metabolism: eicosanoids, digestion and absorption of lipids, lipoprotein metabolism.	Seminar: carbohydrate metabolism.
7	Lipid metabolism: lipid mobilisation, oxidation of fatty acids, ketone bodies, diabetes mellitus.	Determination of glucose-6-phosphatase activity.
8	Lipid metabolism: synthesis of fatty acids, synthesis of triacyl glycerols and phospholipids, sphingolipids, cholesterol and steroid metabolism.	1st MTO.
9	Amino acid metabolism: digestion and absorption of proteins, catabolism of essential amino acids, fate of amino group, urea cycle.	Seminar: lipid metabolism.
10	Amino acid metabolism: metabolism of non-essential amino acids, fate of carbon skeleton of amino acids, one-carbon units, glutathione.	Determination of triacyl glycerol and cholesterol.
11	Amino acid metabolism: Synthesis of hem and porphyrine, enterohepatic circulation of hem degradation products.	Seminar: amino acid metabolism.
12	Citric acid cycle: steps and regulation of the cycle, relationship between the cycle and other metabolic pathways.	Seminar: citric acid cycle, respiratory chain, oxidative phosphorylation. 2nd MTO.

Week	Lecture topics	Practice / Seminar topics
13	Mitochondrial transport systems, mechanism of respiratory chain and oxidative phosphorylation.	Investigation of oxygen consumption of isolated mitochondria.
14	Nucleotide metabolism: synthesis and degradation of purine and pyrimidine nucleotides, salvage pathways, synthesis of deoxyribonucleotides.	Nucleotide metabolism. Determination of uric acid concentration.

Cytomorphology and Microtechnics

Official course information		Details
Course name		Cytomorphology and Microtechnics
Course code		AOK-OAKV211
Semester/year		2024/2025
ECTS		2
Final successful grade		Good (4)
Date		16. 12. 2024
Corresponding syllabus		Cytomorphology and Microtechnics

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Week	Topics
1	Introduction
2	The cell membrane and primary active transport
3	Secondary active transport and ion channels
4	Receptors and signaling
5	Cell junctions
6	Extracellular matrix
7	The cytoskeleton
8	The endoplasmic reticulum and the Golgi apparatus
9	Vesicular transport
10	Lysosomes and their classes. Peroxisomes
11	The mitochondrion
12	The nucleus and the nucleolus
13	The cell cycle, mitosis, and meiosis

How to learn Biochemistry?

Official course information		Details
Course name	How to learn Biochemistry?	
Course code	AOK-OAKV361	
Semester/year	2024/2025	
ECTS	1	
Final successful grade	Pass (2)	
Date	10. 06. 2025	
Corresponding syllabus	Not provided in the supplied materials.	

Complete Detailed Syllabus

This elective (AOK-OAKV361) is not published as a weekly syllabus in the University of Szeged Curriculum 2025/2026 booklet. No syllabus was added, because it is not in the second document.

4. Cell Biology & Molecular Genetics

Cell Biology and Molecular Genetics I

Official course information		Details
Course name		Cell Biology and Molecular Genetics I
Course code		AOK-OAK151
Semester/year		2023/2024
ECTS		4
Final successful grade		Pass (2)
Date		06. 02. 2024
Corresponding syllabus		Cell Biology and Molecular Genetics I.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Week	Lecture topics	Practice / Seminar topics
1	Structure and operation of the cell	Handling of technical devices
2	The DNA	Microscopy-1
3	Transcription, translation & proteins	Microscopy-2
4	Mutation & jumping genes	DNA and RNA purification
5	Bacterial genetics	Genetic exercises
6	Genetic regulation in eukaryotes	Separation techniques
7	Mendelian and non-Mendelian genetics	Lac operon & consultation
8	Epigenetics	
9	Genes and traits	
10	Genetic diseases	
11	Evolution	
12	Cytoskeleton & membrane processes	
13	Molecular biology of viruses	
14	Frontiers of molecular and cell biology	

Cell Biology and Molecular Genetics II

Official course information		Details
Course name		Cell Biology and Molecular Genetics II
Course code		AOK-OAK153
Semester/year		2023/2024
ECTS		4
Final successful grade		Pass (2)
Date		02. 07. 2024
Corresponding syllabus		Cell Biology and Molecular Genetics II.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Week	Lecture topics	Practice / Seminar topics
1	Human genome	Molecular cloning
2	Genetically modified organisms & cloning	PCR & DNA sequencing
3	Cell cycle & tumor formation	Detection of DNA and RNA
4	Molecular medicine	Detection of proteins
5	Cell signalling-1	DNA and protein chips, DNA finger printing
6	Cell-signalling-2	Genetic exercises
7	Cell communication & tissue differentiation	Reporter genes & consultation
8	Genetic regulation of ontogenesis	
9	Neural communication & consciousness	
10	Molecular biology of sensation	
11	Immunogenetics	
12	Molecular evolution	
13	Genetics of behaviour	
14	Genetic disease of brain and psyche	

5. Physiology

Medical Physiology I.

Official course information		Details
Course name		Medical Physiology I.
Course code		AOK-OAK091
Semester/year		2024/2025
ECTS		8
Final successful grade		Pass (2)
Date		28. 01. 2025
Corresponding syllabus		Medical Physiology I.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation. The 2025/2026 booklet lists physiology as topic blocks rather than numbered academic weeks.

Topic block	Lecture topics	Practice / Seminar topics
1	Membrane physiology: membrane transport, signalling systems, cellular electrophysiology	Introduction to Physiology labs. Membrane electrophysiology
2	Nerve and muscle physiology: primary sensory neurons, autonomic nervous system, motor neurons, striated muscle and smooth muscle.	Electromyography (EMG)
3	Blood physiology: fluid compartments, blood plasma, erythropoiesis and degradation of red blood cells, ABO and Rh blood groups	Blood tests: haematocrit, haemoglobin concentration, cell counts, ABO/Rh blood groups. Blood tests: hemostasis
4	Respiratory physiology: ventilation, gas exchange, regulation	Human spirometry
5	Cardiovascular physiology: the cardiac cycle, cellular electrophysiology and ECG, hemodynamics, the microcirculation, autonomic and hormonal regulation of the systemic and local circulation.	Circulation: Cardiac cycle. Circulation: ECG. Circulation: Hemodynamics
6	Renal physiology	Renal clearance of test substances

Medical Physiology II.

Official course information		Details
Course name		Medical Physiology II.
Course code		AOK-OAK093
Semester/year		2025/2026
ECTS		10
Final successful grade		Good (4)
Date		01. 07. 2026
Corresponding syllabus		Medical Physiology II.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation. The 2025/2026 booklet lists physiology as topic blocks rather than numbered academic weeks.

Topic block	Lecture topics	Practice / Seminar topics
1	Physiology of the gastrointestinal tract	Urine tests.
2	Metabolism and nutrition.	Gastrointestinal tract: study of digestion and nutrition.
3	Endocrine systems: hypophysis, thyroid gland, adrenal gland, endocrine pancreas	Endocrinology: Oral glucose tolerance test, pregnancy test
4	Integrative physiology: regulation of energy metabolism, osmoregulation, volume regulation, potassium, calcium, pH homeostasis, Thermoregulation.	pH regulation, evaluation of arterial blood gas
5	Sports physiology	Study of cardiovascular adaptation to physical exercise.
6	Reproductive physiology: sexual function, physiology of pregnancy, parturition, growth and development.	Study of human EEG, mini mental test
7	CNS physiology: introduction, the cerebral circulation	Study of the cerebral circulation
8	Sensory systems: somatosensory system, pain, vision, hearing, olfaction and taste	Tests of somatosensory systems. Test of hearing. Tests of vision
9	Motor systems: spinal, brainstem, cortical integration of motor functions. The vestibular system. The role of the cerebellum and the basal ganglia in motor functions.	Study of human motor functions
10	Sleep/wake cycle, the EEG. Circadian rhythms.	Cognitive tests and study of sleep-wake cycling
11	Physiology of emotions, motivation, reward and punishment. Physiology of learning and memory. Physiology of speech	

6. Medical Physics

Medical Physics I.

Official course information	Details
Course name	Medical Physics I.
Course code	AOK-OAK101
Semester/year	2023/2024
ECTS	2
Final successful grade	Pass (2)
Date	21. 12. 2023
Corresponding syllabus	Medical Physics I.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Topic type	Details
Lecture	Biomechanics. Muscle function. Deformations, elasticity, viscoelasticity. Biomechanics of muscle function: relationships between muscle length and tension; force, velocity and power in skeletal muscles. A mechanical model of skeletal muscles. Surface forces in biomaterials: surface tension, wall tension in hollow bodies.
Lecture	Fundamentals of the senses: hearing. Reflexion and refraction of sound at boundaries between media; acoustic resistance; Doppler effect; sound level; subjective loudness. Frequency dependence of human hearing. The role and function of the outer, middle and inner ear.
Lecture	Fundamentals of the senses: vision. Reduced eye model, accommodation, adaptation, molecular mechanisms of vision, colour vision. Vision defects; the limits of visual acuity.
Lecture	Flow of fluids. Equation of continuity, Bernoulli's law. Laminar and turbulent flow; Reynolds number. Viscosity of fluids: Newton's law of friction, the viscosity of blood, Hagen–Poiseuille law.
Lecture	Diffusion and other transport processes. Fick's laws. Transport across membranes. Osmosis: Starling equilibrium.
Lecture	Thermodynamics. Heat balance of the human body. Basal metabolic rate. Newton's law of cooling.
Lecture	Signal analysis. Analogue and digital signals. Digitisation. Shannon's sampling theorem. Aliasing. Spectral analysis: the Fourier transform.
Seminar	Biomechanics.
Seminar	Oscillations and waves. Hearing.
Seminar	Optics. Vision.
Seminar	Flow of fluids.
Seminar	Thermodynamics.
Seminar	Consultation.

Measurements in medical physics I.

Official course information		Details
Course name		Measurements in medical physics I.
Course code		AOK-OAK103
Semester/year		2024/2025
ECTS		1
Final successful grade		Good (4)
Date		06. 01. 2025
Corresponding syllabus		Measurements in medical physics I.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Item	Topics
1	Occupational health and fire safety training
2	Anthropometric measurements. Fundamental aspects of measurements: derived quantities, measurement error
3	Sound as a mechanical wave
4	Optics of the eye
5	Blood pressure measurement principles and their application
6	Analysis of blood pressure data
7	Practical skills test

Medical Physics II. lecture

Official course information		Details
Course name		Medical Physics II. lecture
Course code		AOK-OAK104
Semester/year		2023/2024
ECTS		3
Final successful grade		Pass (2)
Date		20. 06. 2024
Corresponding syllabus		Medical Physics II.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Topic type	Details
Lecture	Electricity, magnetism and electromagnetism.
Lecture	Bioelectric phenomena.
Lecture	Quantum physical phenomena in life sciences.
Lecture	Spectroscopy and laboratory medicine.
Lecture	Principles of lasers. Medical applications of lasers.
Lecture	Microscopy (optical-, scanning-, electron-). Mass spectrometry.
Lecture	X-rays: general properties, use in diagnostics. Absorption of X-radiation. Producing X-rays, interaction with living substances.
Lecture	Nuclear physics. Radioactivity. Nuclear radiation, dosimetry.
Lecture	Practical application of radioactive isotopes. Particle accelerators in medical practice.
Lecture	Medical imaging techniques: ultrasound, CT, MRI/NMR, PET, infrared diagnostics.
Lecture	Physical basis of therapeutic methods: laser-, light, radio- and heat therapy; therapeutic use of electricity.
Lecture	Molecular and cellular diagnostics: sedimentation, electrophoretic methods, flow cytometry.
Seminar	Electricity, magnetism.
Seminar	Bioelectricity.
Seminar	The electromagnetic spectrum. Spectroscopy. Lasers.
Seminar	X-rays.
Seminar	Nuclear physics; radioactivity.
Seminar	Consultation.

Measurements in medical physics II.

Official course information		Details
Course name		Measurements in medical physics II.
Course code		AOK-OAK106
Semester/year		2023/2024
ECTS		1
Final successful grade		Satisfactory (3)
Date		28. 05. 2024
Corresponding syllabus		Measurements in medical physics II.

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Item	Topics
1	Occupational health and fire safety training
2	Electrocardiography
3	The physical principles of spectroscopy
4	Introduction to nuclear medicine
5	Measurements with ultrasound
6	Tomographic image reconstruction
7	Practical skills test

Medical Statistics lecture

Official course information		Details
Course name		Medical Statistics lecture
Course code		AOK-OAK107
Semester/year		2023/2024
ECTS		1
Final successful grade		Good (4)
Date		21. 05. 2024
Corresponding syllabus		Medical Statistics

Complete Detailed Syllabus

Week	Practice topics
1	Types of data, their characterization, and visualization. Definitions of continuous and discrete variables and characterization of their distributions.
2	Basics of probability: Probability; discrete probability variables and their distribution, expected value, and variance; discrete distributions, binomial distribution.
3	Odds and odds ratios. 95% confidence interval for the odds ratio, practical examples.
4	Measurements of diagnostic tests. Diagnostic tests and their measurements: sensitivity, specificity, PPV, NPV and diagnostic accuracy.
5	The normal distribution. Standardization. The binomial test. Confidence intervals for the population mean.
6	1st MTO.
7	T-tests: one-sample, paired, Student and Welch two-sample t-test.
8	Analysis of variance: principle of one-way ANOVA, F-test, pairwise comparisons.
9	Correlation and linear regression analysis.
10	The chi-squared test for independence: assumptions, Fisher exact test.
11	Measure of agreement; 2x2 tables in epidemiology: Cohen-Kappa, relative risk.
12	Survival analysis: life tables, Kaplan-Meier product limit, log-rank test.
13	2nd MTO.
14	Nonparametric methods: Wilcoxon rank test; Mann-Whitney test; Kruskal-Wallis test; rank correlation; summary.

7. Immunology

Immunology

Official course information		Details
Course name		Immunology
Course code		AOK-OAK061
Semester/year		2024/2025
ECTS		2
Final successful grade		Excellent (5)
Date		27. 06. 2025
Corresponding syllabus		Immunology

Complete Detailed Syllabus

Source: University of Szeged, Albert Szent-Györgyi School of Medicine, Curriculum 2025/2026 (official syllabuses). Student grades, dates, ECTS and course codes are unchanged from the original compilation.

Week	Topics
1	The structure and working principle of the immune system. Central and peripheral lymphoid organs. (Definition of antigen, epitope, hapten, pathogen)
2	Characteristics of innate immunity. The relationship between innate and adaptive immunity.
3	Complement system. Cell types and mediators involved in inflammation and acute phase response.
4	The structure of MHC molecules, polymorphism. Antigen presentation. Development of T and B cells.
5	Antigen recognition function of T lymphocytes. The T cell mediated immune response. T cell types, their effector functions.
6	B lymphocytes. B cell activation, antigen-dependent differentiation of B cells. The structure of antibodies, antibody-mediated effector functions.
7	TEST FOR RECOMMENDED GRADE (1. MTO)
8	Immune responses against extracellular pathogens. Immune responses against intracellular pathogens. Immunescape. Immunological memory. Vaccination.
9	Autoimmunity. Peripheral and central immune tolerance.
10	Types and characteristics of hypersensitivity reactions. Allergic reactions.
11	Transplantation, pregnancy immunology, immunodeficiency pathology.
12	2. TEST FOR RECOMMENDED GRADE (2. MTO)
13	Tumor immunology. Immunotherapies and their role in tumor therapy.
14	Basic immunology methods. Monoclonal antibodies, Immunodiagnostics.

8. Surgery / Clinical Skills

Basic Life Support I.
